

Artsy REST API Setup

1 Artsy Registration

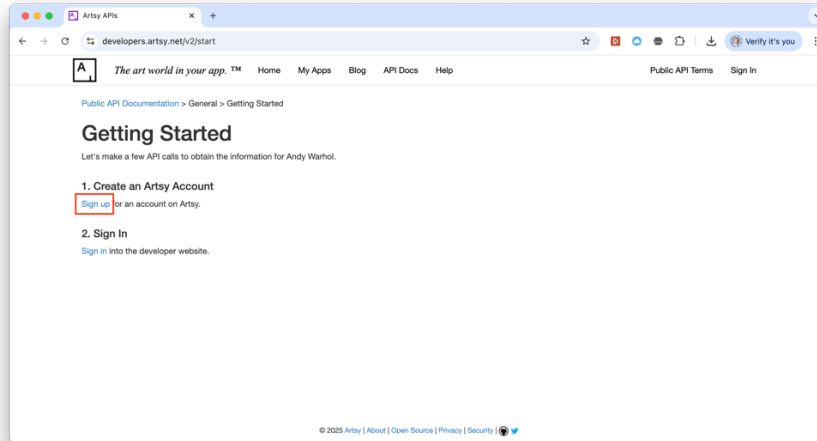

To use **Artsy API**, you need to create a developer account in Artsy, create an app and get a **client ID** and a **client Secret**.

In your browser, navigate to this website:

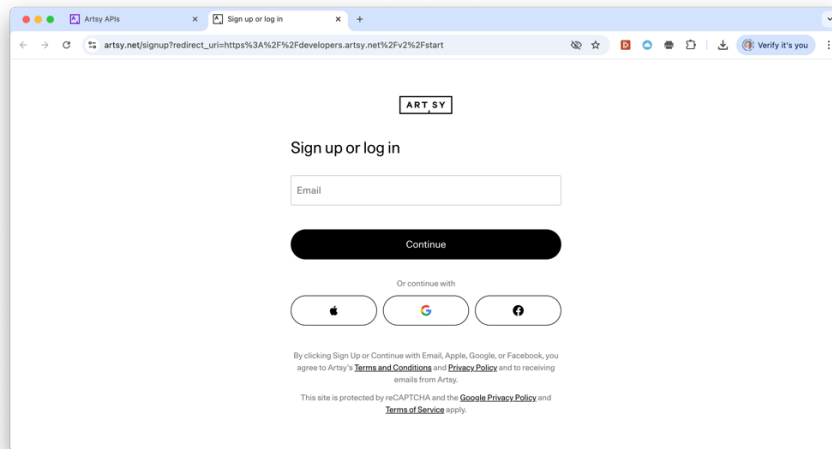

<https://developers.artsy.net/>

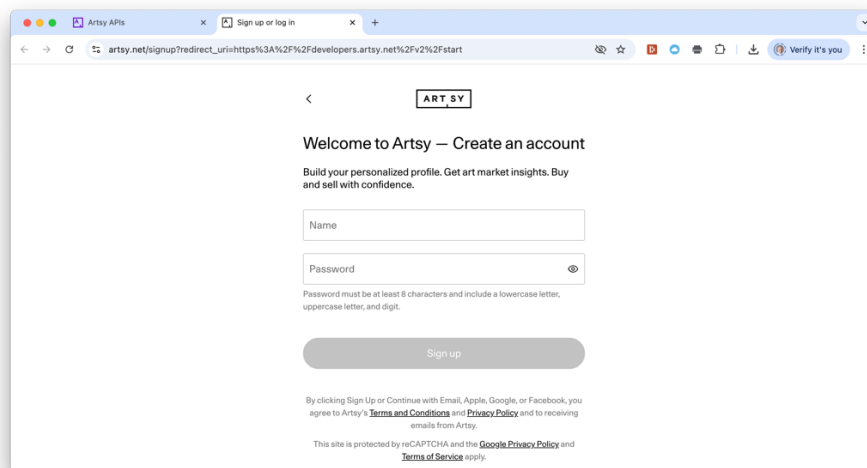

Click to the “**Ready? Start Here**” button on the left right of the page to navigate to the **Getting Started** page.

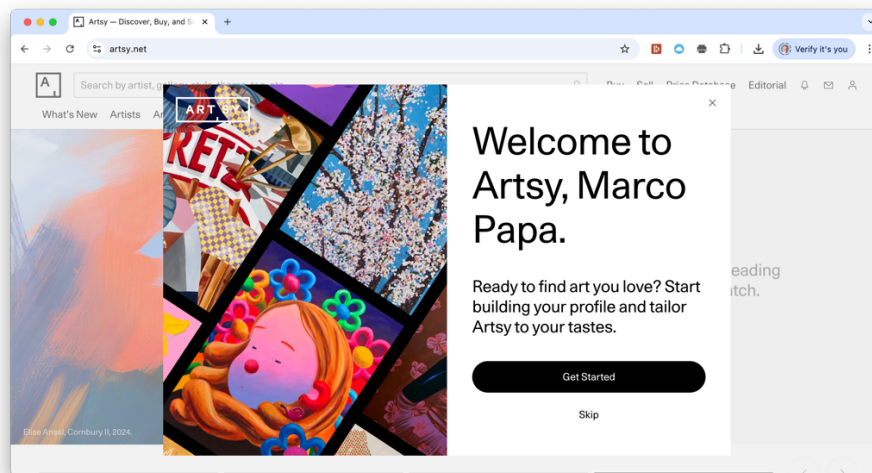

Click on **Sign up**. The **Sign up or log in** page appears.

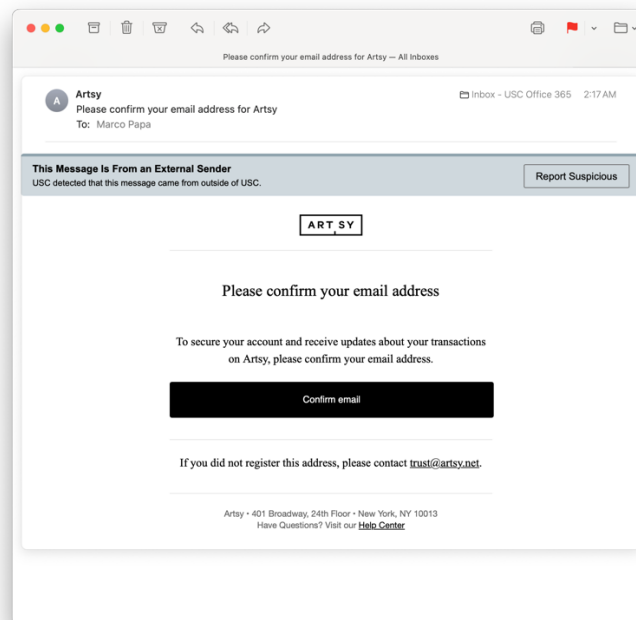

Enter your USC e-mail address and click **Continue**. The **Create an Account** page appears.

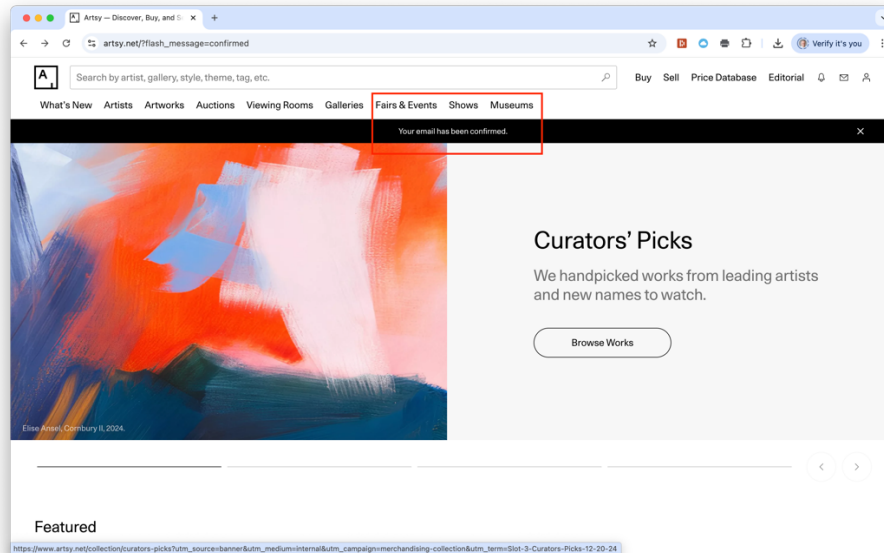

Enter a **Name** and a **Password** and click **Sign Up**. The Welcome page appears.

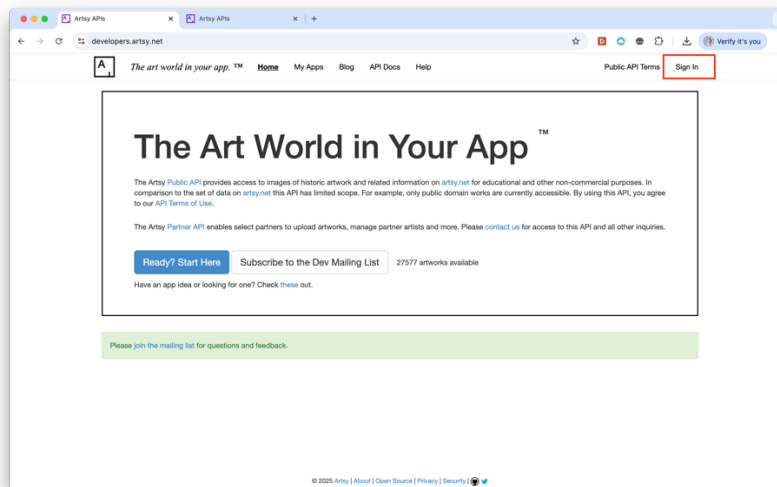

Check your e-mail. You should have received an email from Artsy.

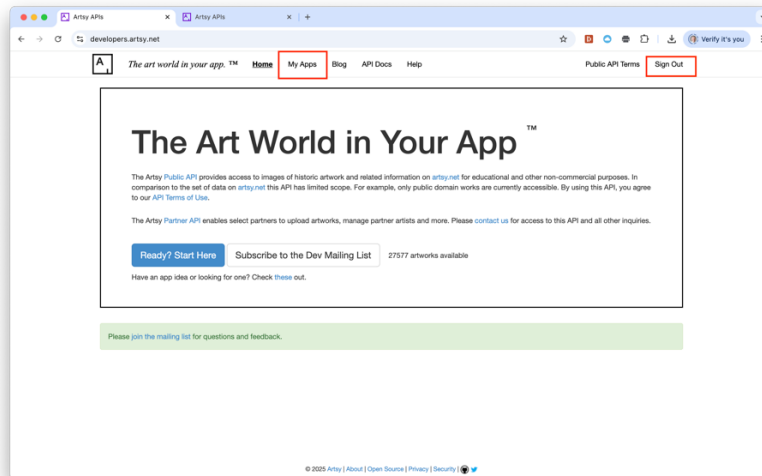

Click on **Confirm email**. You will be taken back to the Artsy website.

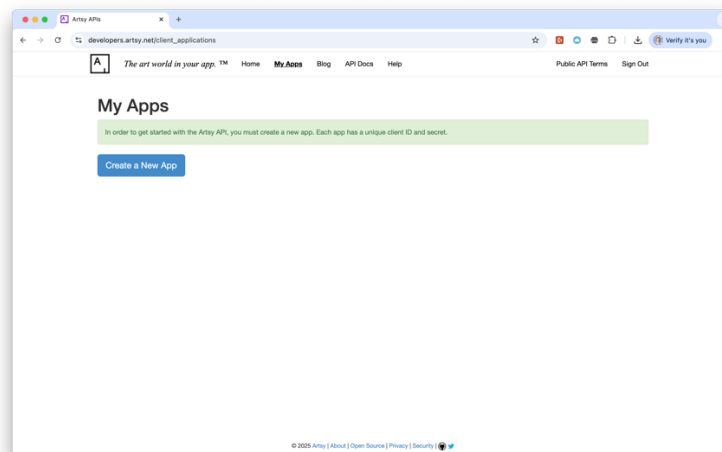

Verify that you see the **Your mail has been confirmed** message, right below the menu bar. Switch back to the Artsy home page tab.

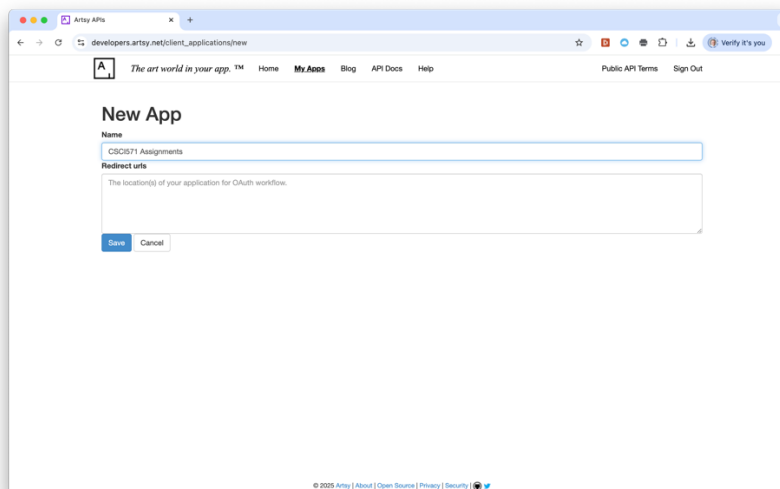

Click **Sign In** on top right. The menu will change to **Sign Out**, as you are automatically signed in, when confirming your e-mail.

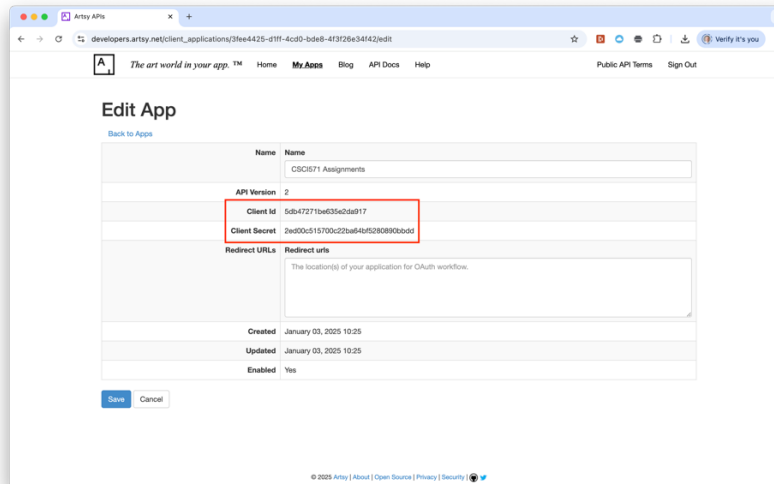

Click the **My Apps** menu. The **My Apps** page appears.

Click the **Create a New App** button. The **New App** page appears.

Enter a **Name**, such as “CSCI Assignments”. Click **Save**. The **Edit App** page appears.

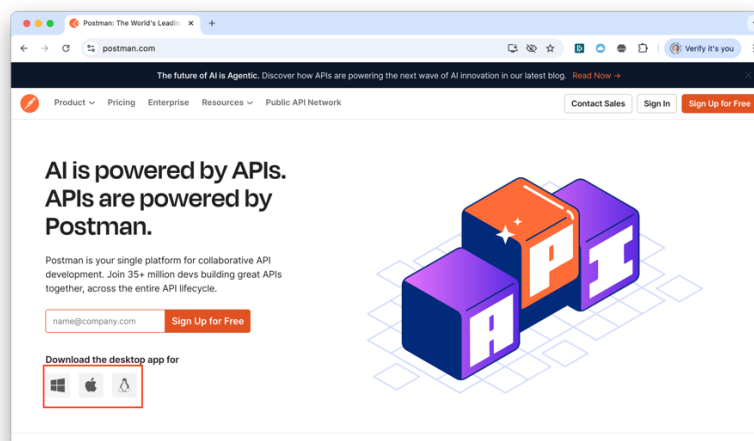

Copy your **Client Id** and **Client Secret** to the clipboard, paste into a file and save the file. You will use the Client Id and Client Secret to obtain a “**token**” to make calls to the Artsy REST API.

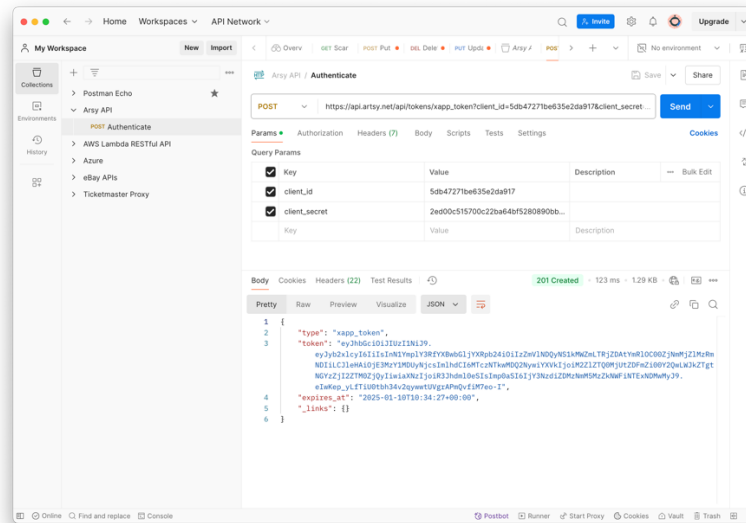

2 Artsy API Test

Next you should test your Artsy credentials. We suggest you use Postman to verify all your Artsy API calls before coding. You can download Postman from this site:

<https://postman.com>

Click one of the icons to download the version for your platform (Windows, macOS or Linux). Follow the installation instructions.

Headers Tab: Enter **'X-XAPP-Token'** as the Key and paste the 'token' as the value,
